phosphonate metabolism protein [imported] - Nostoc sp. (strain PCC 7120)
S.Species Nostoc sp. PCC 7120
A.Note: Nostoc sp. strain PCC 7120
C.Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Dec-2002
C.Accession: AE2083
R.Acareko, T.: Nakamura, Y.: Wolk, C.P.; Kuritz, T.: Sasamoto, S.: Natanabe, A.: Iriguchi Nakazaki, N.: Shimpo, S.: Sugimoto, M.: Takazawa, M.: Yamada, M.: Yasuda, M.: Tabata, S.: Aprite: Complete Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium Ana A; Reference number: AB1807; MuID:21595285; PMID:11759840
                                                                                                                    A Status: preliminary

similarity).

SUBCELLULAR LOCATION: Microsomal.

TISSUE SPECIFICITY: Highly expressed in kidney, adrenal gland and distal colon. Detected at much lower levels in lung.

SIMILARITY: Belongs to the short-chain dehydrogenases/reductases (SDR) family.

NATURE 390: 249-256 (1997).

-I FUNCTION: CHEMOTYCTIC-SIGNAL TRANSDUCERS RESPOND TO CHANGES IN THE CONCENTRATION OF ATTAACTANTS AND REPELLENTS IN THE ENVIRONMENT, TRANSDUCE A SIGNAL FROM THE OUTSIDE TO THE INSIDE OF THE CELL, AND FACILITATE SENSORY ADAFTATION THROUGH THE VARIATION OF THE LEVEL OF METHYLATION. ALL ANION ACCOUNT HAS ATTRACTANTS IN B.SUBTILIS, THEY APPEAR TO CAUSE AN INCREASE IN THE TURNOVER METHYL GROUPS, LEADING TO METHYLATION OF AN UNIDENTIFIED ACCEPTOR, WHILE REPELLENTS HAVE BEEN SHOWN TO CAUSE A DECREASE IN METHYL GROUP TURNOVER. THE METHYL GROUPS ARE ADDED BY A METHYLESTASE.

AND REMOVED BY A METHYLESTBRASE.

-! SIMILARITY: Contains I HAMP domain.

Nature 404:502-506(2000).
-!- CATALYTIC ACTIVITY: ATP + 3-phospho-D-glycerate = ADP + 3-phospho-D-glyceroyl phosphate.
-!- PATHWAY: Second phase of glycolysis; second step.
-!- SATHWAY: Second STEP.
-!- SUBCELLULAR LOCATION. Cytoplasmic (Potential).
-!- SIMILARITY: Belongs to the phosphoglycerate kinase family.
-!- SIMILARITY: Belongs to the phosphoglycerate kinase family.

Mol. Microbiol. 47:1495-1512(2003).
-!- FUNCTION: Gatalyzes the interconversion of 2-phosphoglycerate and 3-phosphoglycerate (By similarity).
-!- CATALYITC 2-phospho-D-glycerate = 3-phospho-D-glycerate.
-!- SIMILARITY: BELONGS TO THE BPG-INDEPENDENT PHOSPHOGLYCERATE MUTASE FAMILY. A-PGAM SUBFAMILY.

UPTAKE AND C-P LYASE. EXACT FUNCTION NOT KNOWN.
MISCELLANBOUS: THE SEQUENCE SHOWN IS THAT OF STRAIN K12.
SIMILARITY: BELONGS TO THE PHNJ FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  shaped heterodimer. The two heads of the heterodimer are then connected by different ends of the cleavable MCDI protein, forming a ring structure (By similarity). SMC3 subfamily. SMC3 subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27 EALLRVKSSERL - - AMLRALAGMCGHRVLPGTGASAIAATVTPKGASMKLKPPRPQSTKS
